

WATERLOO HEALTHCARE

Better Carts for Better Outcomes

PRE-MOUNTED ACCESSORIES

For a small (*per cart*) fee, Waterloo Healthcare can pre-mount most accessories prior to shipment. This virtually turn-key solution allows you to roll your new carts into service right off the delivery truck.

Contact your local Waterloo Representative or our Customer Service Team and they can walk you through the process.

Our team will help you determine locations for each accessory using our cart configuration worksheet. Once your accessory configuration has been determined, we will provide you a quotation that includes pre-mounted accessories. Pricing is commensurate with the number of accessories that require pre-assembly.

NOTE: *There are certain components that will need to be mounted on-site. Items such as IV poles, tilt bins, defibrillator shelves (that extend high above the cart) will need to be mounted by the customer on-site due to freight damage risk. We will mount the brackets for these items at the factory, so all you need do is slide the IV pole into place, mount the defibrillator shelf with one screw, and/or hang the tilt bins on the factory installed trellis rail.*

Below are images of an emergency cart pre-configured with common accessories and ready for shipment.

ACCESSORIES THAT REQUIRE LIGHT ON-SITE ASSEMBLY

IV POLE (IV-2)

IV pole bracket is secured to the cart.

The IV pole itself needs to be slid into position on-site. No tools required.

VERTICAL BASE RAIL SYSTEM (BRS-2)

Base rail system will be installed as shown above. Any hanging accessories must be attached by the customer.

SWIVELING MONITOR SHELF (ER-SHLF)

Vertical support pole secured to the cart.

The defibrillator tray itself needs to be mounted on-site with the included bolt and hex wrench.

OTHER COMMON ACCESSORIES

CARDIAC BOARD BRACKETS (CBB-9)

Waterloo can install cardiac board brackets.

HANDLES

Waterloo can install the push handles.

OXYGEN TANK BRACKET (OTB-5)

Waterloo can install oxygen tank bracket onto the mounting panels.

Pre-assembled accessories is a great option when transitioning an entire fleet of emergency carts. It allows your team to focus on stocking and deploying the carts, not the assembly.

Carts with pre-assembled accessories will take up more room in a truck for shipment. So bear in mind there may be increased freight costs as we prefer to use dedicated trucks for carts with pre-assembled accessories.

Contact us for more information on pre-assembled accessories!
